## HEALTH AND SAFETY POLICY

Health and Safety is a fundamental consideration for all architects and designers. It should be part of everyday working both with activities inside the office and on every project on site. There is both a legal and professional responsibility to ensure understanding and application of health and safety principles at all times.

Our statement of general policy sets out the standards for the Practice, with its overriding principles being that our staff are required:-

- To provide adequate control of the health and safety risks arising from our work activities
- To consult with our employees on matters affecting their health and safety
- To ensure safe handling and use of substances
- To provide information, instruction and supervision for employees
- To ensure all employees are competent to do their tasks, and to give them adequate training
- To prevent accidents and cases of work-related ill health
- To maintain safe and healthy working conditions
- To review and revise this policy as necessary at regular intervals

Health & Safety in Design and Construction is governed by The Construction (Design & Management) CDM Regulations 2007, which establishes the duty of the client, consultants and CDM co-ordinator to manage and coordinate health and safety throughout the process of the project. Health and safety is an integral part of our design process.
